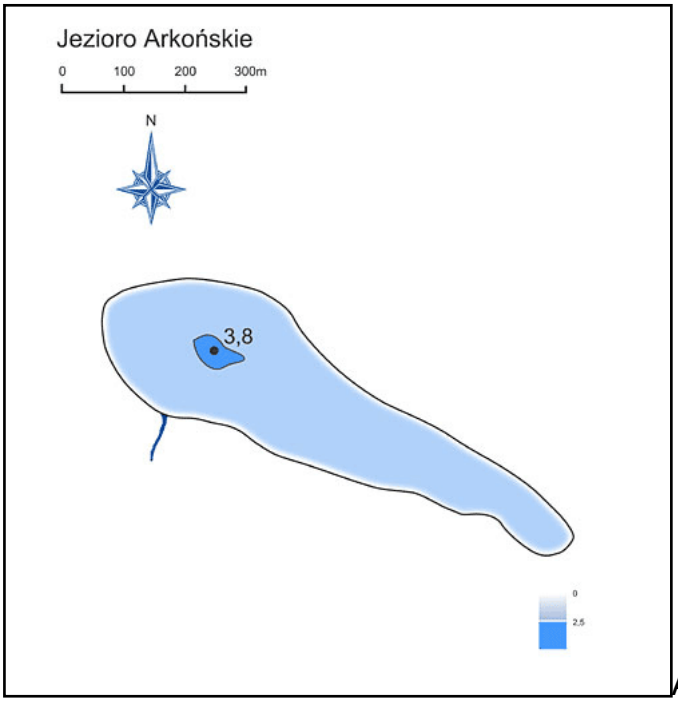
Arkońskie Lake



Also known as Świnka or Ciche, has the area of 13,14ha and max. depth of 4m. A lake located in a land gully stretching horizontally from Wygon to Moczele called Rynna Moczelska. From this totally surrounded by woods lake flows out a small leak supplying water to a stream called Moczel that goes into Drawa. This lake has dark water and virtually lacks vegetation. Its name is very old and was used as early as in the year 1310. Fish control researches have found some fish species in this lake. Dominating are: roach, bream, and perch. Tench, rudd, and pike can also be found.
